HDMI™
HIGH-DEFINITION MULTIMEDIA INTERFACE

Contol Play's team has done an audio/video system audit with you to ensure compatibility before this console was delivered. **All necessary adapters/cables are included in this box.**

Our Support Team is here to assist with each stage of setup and installation. if you need any assistance, please call us at: **1-866-896-3470 ext.1** or Chat: **controlplay.com/contact**

Technical Requirements

Audio

The console comes with a regular stereo, line-level audio output: 1/8" (3.5mm). This output connects directly to your mixer or sound equipment using an audio cable.

Video

This console is equipped with HDMI and DisplayPort video outputs. S-Video, Component, and Composite video output requires a separate adapter. A video distribution system is recommended. Contact Control Play Support if you have any questions about your video connections.

Internet

A direct, hard-wired connection from your router or modem is recommended for the most reliable performance. The internet connection download speed should be a minimum of 3 Mbps for optimal results.

Electrical

To maintain warranty coverage for electronic components, ensure the console is plugged into a surge protection device. For maximum protection and reliability, an Uninterruptible Power Supply (UPS) is recommended—this can be purchased at any electronics or computer store.
